

ASPECTS UNSEEN

Spott Church, East Lothian

A SMALL BUT TYPICAL ASPECTS UNSEEN PROJECT

There has been a continuous Christian presence with a dedicated building at Spott since at least the **14th century**, with the current building having parts from the 17th century and a main structure from the late 18th/early 19th century.

This project created an AU 3D Digital Model with ultra-high-resolution textures to record the condition of the building. From this authoritative record orthoimage plans and elevations were produced, enabling one of our collaborators, Taft Architects, to prepare a detailed Condition Survey.

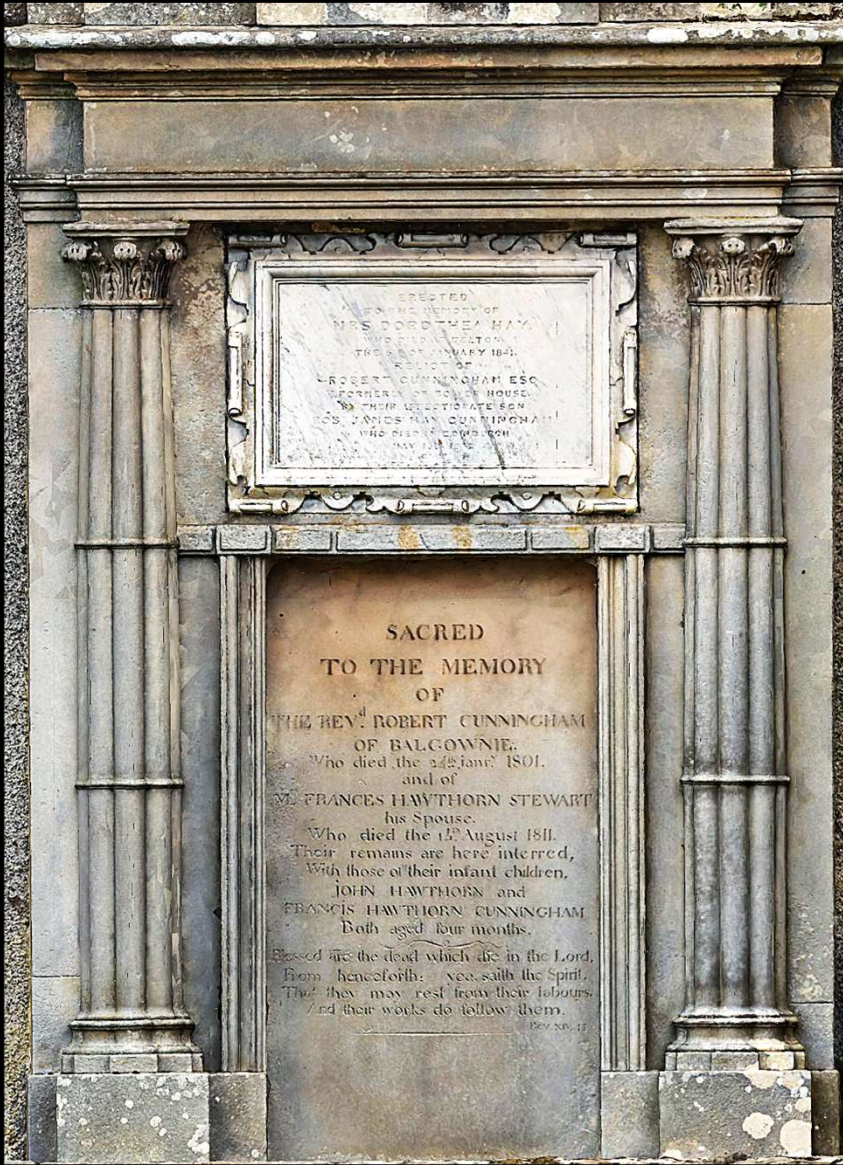

A film by another of our collaborators, Seeker Films, extended the project into public story telling and fundraising.

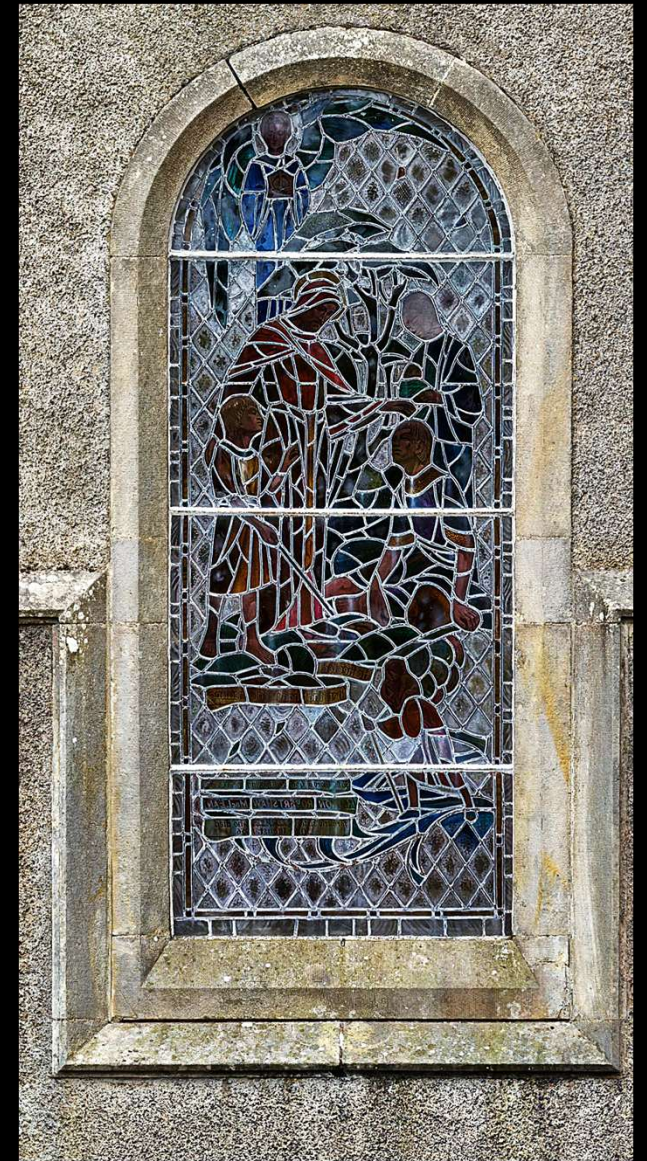

The AU 3D Digital Model

A true-to-scale orthoimage of the East Elevation produced from the model.

Extracts from the elevation illustrating the resolution of the AU 3D Digital Model from which the elevations were created
